

## How to fit the diagram to the desired page size or number

In the **Page Setup** dialog you can modify the diagram size and the number of pages for your diagram.

### Mode

By selecting a scaling mode from the drop down list and setting the corresponding values **Zoom factor** and **Maximum width/height** you specify a zoom factor for the output. After having clicked the **Apply** button, the values which result from your settings are shown under **Current**.

### Zoom factor

100% is equivalent to the original size; a smaller value correspondingly reduces the size of the diagram, a greater value increases the size of the diagram.

### Fit to page counts

If you select this option, you can specify the maximum number of pages, both width-wise and height-wise, into which the diagram may be split for the output. If necessary, one of the two values may be ignored in order to print the diagram as large as possible while preventing it from being distorted.

### Zoom with horizontal fit (for Gantt charts only)

This option lets you regulate the pagination by selecting a zoom factor as well as a fixed number of pages in width. This number of pages is reached by downsizing or expanding the time scale.
