Netronic VJS

Visual Job Scheduler

Netronic

Optimize your projects, plan with confidence

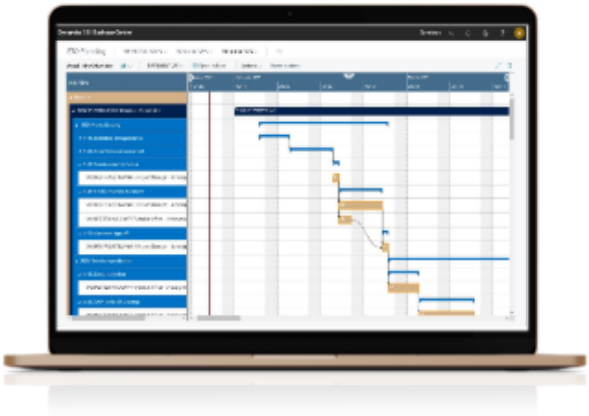

Successful project delivery depends on having complete visibility into project timelines, resources, and task dependencies. A visual planning environment gives planners the control they need to balance resources, respond quickly to change, and keep projects on schedule.

VJS

What is VJS?

The Visual Job Scheduler (VJS) extends Microsoft Dynamics 365 Business Central with interactive visual project and resource planning. It combines a project Gantt chart and a resource Gantt chart with intuitive drag-and-drop scheduling, giving planners complete control over project timelines, staffing, and day-to-day scheduling.

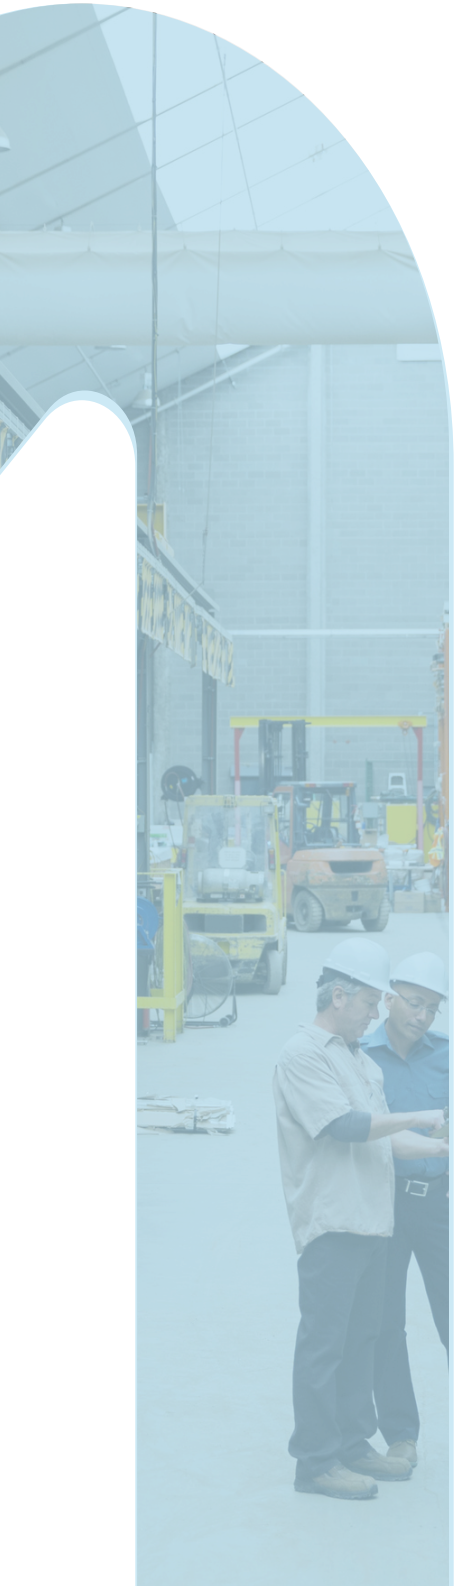

By bringing together jobs, job tasks, job planning lines, and resource allocations in a single planning environment, VJS provides immediate visibility into timelines, dependencies, bottlenecks, and resource conflicts, helping planners stay in control even when plans change.

VJS

Benefits of VJS

Keep projects on track and resources balanced

Streamline operations
All jobs, tasks, and resources in one planning board with both a project Gantt and a resource Gantt. No more searching through tables or spreadsheets.

Reliability & transparency
See timelines, dependencies, bottlenecks, and conflicts at a glance. Move a task and its linked successor tasks together with a single drag-and-drop action.

Unlocked capacity
Resource utilization visibility helps identify shortages faster and makes it easy to assign work from resource groups to individual resources.

Plans using reality
Real-time warnings immediately show when a scheduling change overloads a resource or resource group, helping planners maintain realistic project schedules.

Sustainable business practices
One live schedule in Business Central replaces printed plans and spreadsheets so everyone works from the latest version.

About VJS

Interactive visual project and resource planning inside Microsoft Dynamics 365 Business Central, extending the standard Jobs/Projects functionality with project and resource Gantt charts, drag-and-drop scheduling, and real-time visibility into projects and resources.

Who is VJS for?

Primary users

- Project managers
- Project schedulers
- Resource planners

Typical challenges

- Limited visibility into project timelines and resource availability
- Balancing resources across multiple projects and competing priorities
- Managing changing schedules, customer requests, and project delays
- Coordinating task dependencies to avoid bottlenecks and missed deadlines
- Keeping project teams aligned with the latest schedules and priorities
- Tracking project progress and identifying potential risks before they impact delivery
- Planning projects in spreadsheets instead of inside Business Central

How VJS helps

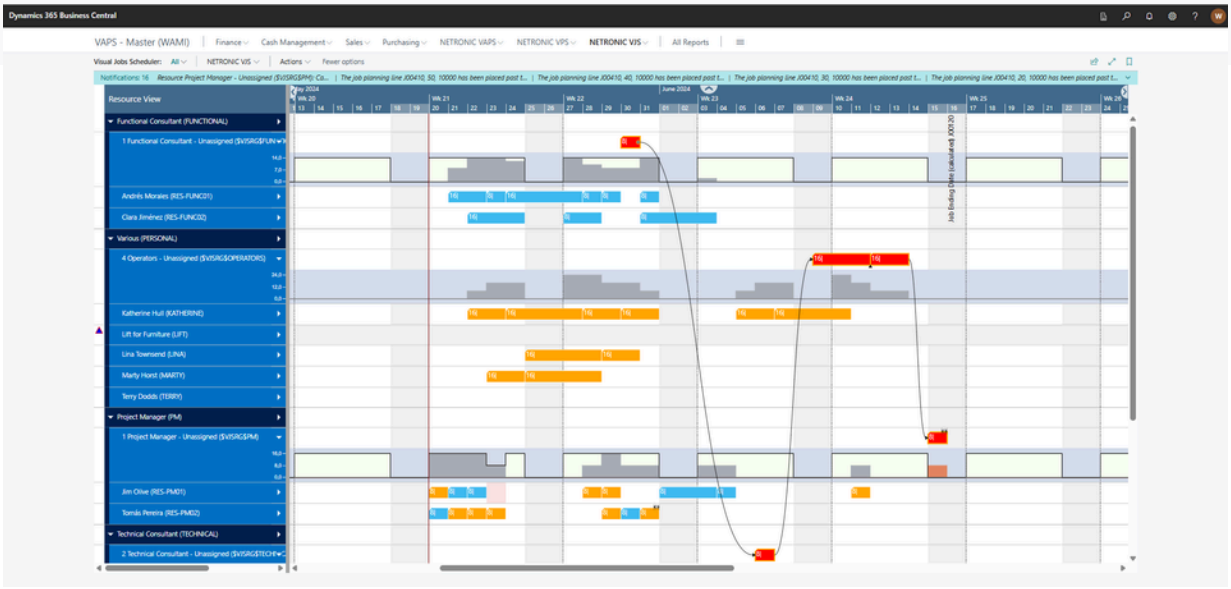

- Create realistic project schedules based on available resources and timelines
- Coordinate people, tasks, and project activities across multiple concurrent jobs
- Adjust project plans quickly as priorities, deadlines, or customer requirements change
- Monitor project progress and identify potential delays before they impact delivery
- Manage task dependencies and resource allocation with greater confidence
- Keep project teams aligned with a single, up-to-date project schedule

Key features

- Project Gantt chart
- Resource Gantt chart
- Drag-and-drop scheduling
- Automatic movement of linked task dependencies
- Resource utilization histogram
- Visual warnings for overloaded resources and late projects
- Jobs, job tasks, job planning lines, and resource allocations in one view
- Drill down from high-level project overview to detailed project structure
- Native Microsoft Dynamics 365 Business Central integration

Technical details

- Native Business Central integration
- Fully integrated with the Jobs/Projects and Resource Planning modules
- Interactive visual planning environment
- Real-time schedule updates in Business Central
- Project and resource Gantt charts

“VJS is a 100% integrated solution and has helped us a lot since everything is under one roof. With everything under one dashboard, it has really become easier for our planners to do the scheduling.”

Cristian Coianiz, Project Manager, Inarca SpA

Bring Your Business Central Solution to Life

We are Boyum IT Solutions, a global software company that helps organizations get more from Microsoft Dynamics 365 Business Central. Through our market-leading solutions, Perfion, Netronic and Fornav, we extend Business Central with powerful capabilities for Product Information Management, Production Scheduling and Business Documents, helping businesses work more efficiently, make better decisions and deliver exceptional customer experiences.

We act as a trusted partner rather than a traditional software vendor. With deep domain expertise, a family-oriented culture and reliable innovation, we guide partners and customers through real industry challenges. For more than 28 years we have been 100% partner-driven, working alongside the Microsoft partner community to create value, drive innovation and support long-term success.

Today, we support over 15,000 customers together with more than 1,100 partners in more than 130 countries. Our purpose, Bring Your Products to Life, reflects our commitment to helping businesses realize the full potential of their products through technology that works for people.
